

Bar code/two-dimensional code reader Interface option

Possible to control measurement instrument by connecting with bar code/QR code reader. RS-232C port is mounted. Measurement data reading can also be performed by connecting with PC.

Characteristic

- Adding simultaneously reader interface and RS-232C port to the measurement instrument. Bar code /two-dimensional code reader(RS-232C connection type) sold in market can be used for connection.
- Setting for measurement instrument can be completed by a code reading and operation error and communication command error can also be avoided.
- Reading and analysis of measurement value can be performed by connecting PC with RS-232C and using measurement data collection application(Windows) attached (excluding a part of models)to measurement instrument.
